Solutions for Problems

- **Your installation give an ERROR like "Installation ERROR: the folder [/.....www] must have permissions to write (755) OR copy..."**

  This problem is maybe because the php no have writing permissions, or the folders no have permissions to write. You need access by FTP to your server and copy the file NewsController.php to

  /YOUR_DIR_ROOT_SHOP/controllers/front/NewsController.php

  this file stay inside module ZIP file, unzip and you find this files in folder /news/install/ or in /YOUR_DIR_ROOT_SHOP/modules/news/install/

  after try install again the module.

- **Your installation give an ERROR : "Can't create table" or The module say not installed**

  1. verify if you have permissions in your database to create tables
  2. if you have other module news you may need remove the tables in your database how have the same name like this:
     ps_news
     ps_news_cats
     ps_news_cats_lang
     ps_news_cats_rel
     ps_news_imgs
     ps_news_imgs_rel
     ps_news_langs
     ps_news_products
     ps_news_rel
     ps_news_tag_lang
     ps_news_tag_rel

- ***Problems in style not display or javacript ?***

  Force a new compile
  In Backoffice go to Admin choose

  Advanced Parameters > Performance

  and Force compile [YES] and Cache [NO] , SAVE the changes .
  Refrex your front store for new compile .
  And put again compile [NO] and Cache [YES] SAVE the changes .
  Attention: make sure you put at end Force compile [NO] and Cache [YES]
